Cumulative Index to Volumes 11–20 (1981–1990)

There are six indexes. The first lists the main articles according to author; each article is given a serial number and the volume, part, and first and last pages are cited. These serial numbers are then used in the second and third indexes to provide a key to articles by subject and by major names. In this way a simple working classification is provided. The fourth index lists Bibliographical Essays, the fifth Conference Reports and the sixth Review Essays – all according to author. In the interest of space, reviews and notices of single books (of which over a thousand have been published during these ten years) have not been included. Readers are reminded that full details are to be found in the annual indexes.
